CHOICE™

CORPORATE PROFILE

Corporate Profile

American Technical Ceramics Corp. (ATC) provides component and custom integrated packaging solutions for the RF, microwave and telecommunications industries. For over forty years we have been "The Engineer's Choice".

ATC designs, develops, manufactures and markets Multilayer Capacitors, Single Layer Capacitors, Resistive Products, Inductors and Custom Thin Film Products for RF, microwave and millimeter-wave applications. Our products are primarily focused on the wireless communications infrastructure, fiber optic, medical electronics, semiconductor manufacturing equipment, defense, aerospace, and satellite communications markets.

Customer interface is administered by our own personnel and independent sales representatives. American Technical Ceramics is headquartered in Huntington Station, New York and has an Advanced Technology Center in Jacksonville, Florida. This is the center of excellence for our traditional product lines and the development and manufacturing facilities for Thin Film and Resistive products.

As part of our globalization initiative ATC has a wholly-owned subsidiary for European Direct Sales, Applications Support and Distribution, located in Kungens Kurva, Sweden. The Company's wholly-owned subsidiary offering Technical Support for Asia is located in Shenzhen, P.R. China. ATC also has local offices in Holzkirchen, Germany Guildford, England and Moscow, Russia

RLC Product Offerings

- Multilayer Ceramic Capacitors
- Single Layer Ceramic Capacitors
- Resistive Products
- Inductors

Process and Packaging Offerings

- Thin Film Custom Products

Markets Served

- Wireless Communications Infrastructure
- Fiber Optics
- Wireless Handsets
- Automotive Electronics
- LMDS/MMDS
- Semiconductor Manufacturing Equipment
- Medical Diagnostic Equipment
- Telecommunications
- Military and Aerospace

▲ ATC's New York Facility occupies approximately 90,000 sq. ft.

Facilities

- **Huntington Station, New York** – Sales, Applications Support, Manufacturing and Distribution Center
- **Kungens Kurva, Sweden** – European Operations and Distribution Center
- **Jacksonville, Florida** – Advanced Technology Center, Manufacturing Facility.

▲ ATC's Jacksonville Facility occupies approximately 100,000 sq. ft.

Introducing ATC's New WL Series, High Frequency Wire Wound Chip Inductors

ATC introduces its new family of RF surface mount inductor components, intended to complement its high frequency ultra low ESR capacitor products. The WL Series Wire Wound Chip Inductor Products have been designed to provide excellent performance at competitive prices.

This Series includes the most widely used traditional EIA case sizes – 0402, 0603, 0805, 1008, and 1206. The WL Inductor Product line is intended for RF and microwave applications and features high self-resonant frequencies (SRF), high Q, and low DC resistance. These products are manufactured on a rugged core made of high quality ceramic material that exhibits high Q at high operating frequencies.

The WL Series is especially attractive for all 800 MHz to 3.4 GHz wireless applications where cost and performance are major factors. These applications include but are not limited to: cellular base stations, broadband wireless services, point-to-point and point-to-multipoint radio as well as other RF and microwave telecommunications systems.

All WL Series Inductor Products are supplied in tape and reel (2000 to 4000 parts per reel depending on case size) as standard, making them ideal for automated pick and place manufacturing applications. The terminations consist of a barrier layer with a lead-free tin-plated finish that exhibits excellent solderability for trouble-free attachments.

Features

- High Q
- High SRF
- Low DC Resistance
- Wide Range of Standard EIA Inductance Values
1 nH to 15000 nH
- Traditional EIA Case Sizes 0402, 0603, 0805, 1008, and 1206
- Lead-Free, RoHS Compliant Terminations
- Rugged Ceramic Core Construction
- Tape and Reel for Automated Placement

General Electrical Specifications:

- Inductance Range: 1 nH to 15000 nH, See Tables
- Operating Temperature: -40°C to +125°C
- Temperature Coefficient of Inductance (TCL):
+25 to +125 ppm/°C Typical From -40°C to +125°C
- Rated Current: See Tables, Pages 2-6
- SRF: See Tables, Pages 2-6
- IDC: See Tables, Pages 2-6
- RDC: See Tables, Pages 2-6

Applications:

- Cellular Base Station Equipment
- Broadband Wireless Services
- Point-to-Point and Point-to-Multipoint Radio
- Satcom Equipment
- Telecommunications Wireless Applications
- RF and Microwave Communications Systems

Circuit Applications:

- Amplifier Matching Networks
- Bias Networks
- Filters
- Oscillators
- Synthesizers

ATC 0402 WL SERIES WIRE WOUND CHIP INDUCTORS

Inductor Selection Guide

ATC Part Number Code

0402 WL 100 K T

EIA Case Size
0402, 0603, 0805, 1008, 1206

Wire Wound Inductor
Inductance value in nH.
1st and 2nd digits are significant digits.
3rd digit is multiplier.
R is decimal point.

Packaging
T - Tape & Reel

Tolerance.
See table below.

Inductance Tolerances		
Code	J	K
Tol.	± 5%	± 10%

The above part number refers to an ATC 0402 WL wire wound chip inductor, 10 nH, K (±10%) tolerance, in tape and reel packaging. Tighter tolerances are available. Consult factory.

Mechanical Configurations

A max.	B max.	C max.	D ref.	E	F	G	H	I	J
.050 (1.27)	.030 (0.76)	.024 (0.61)	0.06 (0.15)	.020 (0.51)	.009 (0.23)	.022 (0.56)	.026 (0.66)	.019 (0.50)	.018 (0.46)

Inches (mm)

Marking Code

0402- No mark due to size.

0603 and 0805 Series - Because of their small size, these parts are marked with a single dot. The inductance value represented by the dot is shown on the data sheet for each series.

1008 and 1206 Series - These parts are marked with three color dots. The table below shows the significance of each color.

Dots 1 and 2 indicate the inductance in nanoHenries

Dot 3 is a multiplier showing the number of added zeroes

- | | |
|------------|------------|
| 0 = Black | 5 = Green |
| 1 = Brown | 6 = Blue |
| 2 = Red | 7 = Violet |
| 3 = Orange | 8 = Gray |
| 4 = Yellow | 9 = White |

Examples:

- Gray Red Black = 82 nH
- Brown Red Brown = 120 nH
- Yellow Violet Red = 4700 nH

Terminations

Terminations for all WL Series Inductor Case Sizes are **Lead-Free, RoHS Compliant**, Tin Plated over Nickel Barrier.

ATC WL SERIES WIRE WOUND CHIP INDUCTORS

Tape and Reel Specifications

ATC WL Series Inductor Products are supplied on tape and reel in standard quantities of 500, 2000 and 4000 parts per reel (see table below), making them ideal for automated pick and place manufacturing applications.

Packaging

Tape Dimensions

Series	A Dim.	B Dim.	C Dim.	D Dim.	E Dim.	F Dim.	G Dim.	H Dim.	I Dim.	Pcs. / per reel

ATC WL SERIES WIRE WOUND CHIP INDUCTORS

Inductor Quality Assurance:

ATC ensures that all of its contracted component manufacturing facilities are ISO 9000 Registered, and that an outgoing product quality level of better than 100 PPM is maintained. ATC'S WL Series products have successfully passed the most rigorous environmental, mechanical and electrical validations. All manufacturing lots receive a tollgate sample inspection of the primary parameter values used to specify an inductor. The test equipment and fixtures listed below in the RF Measurement Table are used to verify RF performance parameters for ATC's WL Series Inductor Products.

Quality and Reliability Testing - Environmental

Item	Examination	Test Method	Performance Specifications
1	High Temperature Storage	Inductors are subjected to +125°C for 48 hours, then tested after 1 hour at room temperature.	<ul style="list-style-type: none"> Inductors shall not have a shorted or open winding. Change in inductance: shall not change more than ±5%. Change in Q: shall not change more than ±10%.
2	Low Temperature Storage	Inductors are subjected to -40°C for 48 hours, then tested after 1 hour at room temperature.	
3	Thermal Shock	Inductors are subjected to 10 cycles of -40°C for 30 min. and +125°C for 30 min., then tested after 1 hour at room temperature.	
4	Moisture Resistance	Inductors are subjected to 10 25-hour cycles from 25°C to 65°C at 80 to 90% RH, and are exposed to -10°C for 3 hours during one of the cycles. Samples are then tested after 2 hours at room temperature.	
5	Life Test	Inductors are subjected to 110°C for 1,000 hours at rated current. Samples are then tested after 1 hour at room temperature.	

Quality and Reliability Testing - Mechanical

Item	Examination	Test Method	Performance Specifications
1	Solderability Dip	Dip terminals into molten Sn63 at 235°C for 5 sec.	Terminals shall exhibit a continuous solder coating free of defects for a minimum of 95% of surface.
2	Adhesion	Reflow solder to circuit lands. A force gauge is applied to side of component.	1 lb. for 0402 2 lbs. for 0603 4 lbs. for all larger parts
3	Vibration	10 to 2000 Hz, 5 Gs for 20 minutes, 12 cycles each, 3 orientations.	1. No mechanical damage 2. Change in L less than ±5% 3. Change in Q less than ±10%
4	Mechanical Shock	MIL-STD-202, method 213, condition A. Test mounted parts 2 axes 6 times (50 G's, 11 ms, half-sine).	1. No mechanical damage 2. Change in L less than ±5% 3. Change in Q less than ±10%

RF Test Measurements

Measured Parameter	Test Equipment	Fixture(s)
Inductance (L)	HP 4291B Impedance Analyzer	Bottom Electrode SMD Test Fixture, Model 16197A
Quality Factor (Q)		
Self Resonant Frequency (SRF)	HP 8722D Vector Network Analyzer	Anritsu Universal test fixture Model 3680K with substrate DUT adapters
DC Resistance (DCR)	Micro-ohm meter	Four Wire Kelvin Probes
