This Handbook shows a most extensive line of Cables and Cable Assemblies in the frequency range of DC to 50.0 GHz.

In various chapters, the different Flexible Cable Assembly categories, the Handy-Form cables and the Semi-Rigid cables are shown. On the newer generation connectors such as PUSH-ONs and Field Replaceable Connectors or Interchangeable Connectors you will find detailed information in two separate sections. The chapter Special Products and Services gives a general overview about speciality products and the company's capabilities. Towards the end of the Handbook you will find detailed mechanical specifications on connectors used.

A **Quick Reference Guide** on Pages 6 and 7 gives details on the subjects that are covered in the individual chapters.

The last pages of this Handbook show a general Index, an Index on Connectors and on Cable Codes as well. This information helps to immediately identify data and knowledge about a certain product or it will give reference to pages where additional information can be derived from.

But just in case you still do not find exactly the product you require, please contact the factory or your nearest Spectrum Area Representative. Due to continuous development we may have solved a similar problem for someone else, or did develop already the product you require.

As it is our main goal to improve specification and performance of the products, Spectrum Elektrotechnik GmbH has to reserve the right to change specifications, design and any other information shown in this Handbook at any time without previous notice.

Because of the comprehensive information gathered in this volume, we call it a Handbook, hopefully the Handbook you like to work with best. If you find the time, we would appreciate your personal opinion about this Handbook.
